1.0	11/11/2026		National Maintenance Team		Initial Draft

1) Leadership and Governance

The National Maintenance Admin leads the national team and owns the National Maintenance Framework, so that every mandir is maintained to one national standard and major work is planned, approved and delivered safely.

a) Own the National Maintenance Framework: standards, procedures, templates and checklists used by local mandirs, and the National Maintenance Guideline.
b) Own the national maintenance budget and annual plan.
c) Set national priorities using asset condition and risk across all mandirs.
d) **Lead the national team** and make sure each national lead delivers their role:
    i) National Maintenance Operations Lead – work orders, action log, meeting papers, dashboards.
    ii) State Maintenance Leads – support to Local Maintenance Leads in each state.
    iii) Compliance & Permits Lead – compliance register and pre-start sign-off.
    iv) Asset & Planned Maintenance Lead – asset register, calendars and lifecycle plans.
    v) Contracts & Procurement Lead – approved contractors, service contracts and quoting.
e) Guide, train and support a Local Maintenance Lead at every mandir.
f) Strengthen samp within the national and local teams.
g) Review the framework, the guideline and these roles as and when required.

2) Asset Register and Planned Maintenance

Knowing the condition of every asset lets the team plan work and budgets ahead, instead of reacting to failures.

a) Make sure a national asset register is built and kept for every mandir: building elements, plant, services, equipment, age, condition, warranty and expected replacement year.
b) Arrange a routine inspection of major assets and equipment at each mandir at least once a year, with a written report and photos.
c) Rate assets by condition and risk, and use this to set priorities across all mandirs.
d) Publish a 12-month planned maintenance calendar for each mandir, covering routine servicing and statutory testing.
e) Prepare a rolling 7-year lifecycle and capital works plan for each mandir, feeding into annual budgets.
f) Coordinate national or state contracts where buying together saves money (for example fire services, HVAC servicing, lift maintenance, pest control, kitchen exhaust cleaning).
g) Schedule disruptive work away from major festivals and events (for example Diwali and Annakut, Janmashtami, Ram Navami and Shibir weekends), and reschedule required work around these dates.
h) Keep as-built drawings, manuals, warranties and certificates in one central, shared location.

3) Major Maintenance Work

Major work carries the highest cost, safety and compliance risk, so it is approved and controlled at national level.

a) Approve major work scopes before quotes are sought.
b) Present capital and major works to the Board through the CAPEX workflow (Submitter, Department Admin, Mandir Coordinator, Board).
c) Make sure no major work starts until the Compliance & Permits Lead has confirmed in writing that all permits, licences, approvals and insurances are in place.
d) Notify the Sanstha's insurer or broker of significant works.
e) Make sure completion certificates, warranties and as-built drawings are filed and the asset register updated when each job closes.

4) Reactive Maintenance and Emergencies

A clear response to faults and emergencies keeps people safe and limits damage to mandir assets.

a) Set national priority levels and response times for faults and breakdowns (P1 Emergency to P4 Planned).
b) Provide a clear escalation path and after-hours contacts for emergencies such as flooding, fire system faults, power loss, gas leaks, storm damage and security breaches.
c) Receive P1 emergency notifications at once and support local teams to make sites safe, call contractors and notify insurers.
d) Manage escalations that local or state level cannot resolve, and escalate to the AAC and Board where funds, national safety, legal or reputational risk are involved.
e) Review significant incidents to find the cause and stop them happening again.

5) Compliance, Permits and Safety

Statutory compliance and safe work practices protect the Sanstha, its volunteers and its visitors.

a) Make sure appropriate permits, licences and approvals are obtained **before** any major work begins.
b) Make sure statutory compliance is tracked at every mandir: fire safety, emergency lighting, electrical testing, backflow, lifts, asbestos and annual fire safety statements or essential safety measures reports, as each state requires.
c) Maintain work health and safety (WHS) procedures for maintenance work, including volunteers working at heights, with ladders, power tools or chemicals.
d) Make sure a compliance register is kept and local teams are alerted before each item falls due.

6) Contractors and Procurement

Using approved, licensed and insured contractors protects quality, safety and value for money.

a) Make sure an approved contractor list is kept for each state, with checked licences, insurances and WHS documents.
b) Set quoting rules (for example, three quotes for work over an agreed amount) consistent with the Sanstha's procurement and CAPEX policies.
c) Make sure contractor performance is monitored, and remove contractors who fall short on safety, quality or conduct.

7) Budget and Spending

Maintenance spending must be planned, approved within delegation and tracked.

a) Prepare the national maintenance budget each year, built up from each mandir's planned, reactive and capital needs.
b) Route capital and major works through the CAPEX authorisation workflow.
c) Make sure local spending stays within the financial approval limits in the National Maintenance Guideline.
d) Track spend against budget for each mandir and flag overruns early.

8) Meetings

Regular meetings keep national and local teams aligned and actions moving.

a) Arrange the monthly national meeting with all Local Maintenance Leads, and call ad hoc meetings when needed (within 24 hours for Priority 1 events).
b) Make sure agendas, dashboards, minutes and the action log are circulated on time (agenda 2 working days before; minutes within 3 working days).
c) Hold a national team meeting fortnightly or monthly, before the national meeting.
d) Run the annual planning workshop to set next year's maintenance calendar, budget and priorities.

9) Reporting

Reporting gives leadership a clear view of mandir condition, compliance, spend and risk.

a) Report maintenance status, risks and spending to the BoT.
b) Report quarterly to the AAC on condition, compliance, spend and risks.
c) Present the annual maintenance report and next year's plan to the Board.
d) Review the monthly national dashboard and KPIs, and act on any that are off target.

10) Stakeholder Relationships

The National Maintenance Admin is the single national point of contact on maintenance matters.

a) Act as the main contact for insurers, landlords and senior leadership on maintenance matters.
b) Work with Mandir Coordinators on priorities, timing and approvals at each mandir.
c) Work with the National Accounts Team on CAPEX submissions, budgets and spend tracking.

11) Support, Training and Knowledge Sharing

Building skills at mandir level makes every local team stronger and less dependent on a few people.

a) Train local teams on the framework, safety, the asset register and reporting tools.
b) Visit sites in person when needed.
c) Share lessons, good suppliers and practical fixes across mandirs, so one mandir's solution helps others.
d) Build volunteer succession so each mandir has at least one trained backup for its Local Maintenance Lead.
