1.0	11/11/2026		National Maintenance Team		Initial Draft

Complete one copy of this document for each State Maintenance Lead.

1) Role and Coverage

The State Maintenance Lead is the link between the local maintenance teams and the National Maintenance Team. The role is held by the Local Facility Admin or Maintenance Lead of the Type A mandir in each state, and covers every mandir in that state.

State	Mandirs covered	State Maintenance Lead
New South Wales	NSW	TBC
Australian Capital Territory	ACT	TBC
Victoria	Victoria and Tasmania	TBC
Queensland	Queensland	TBC
Western Australia	Western Australia	TBC
South Australia	South Australia and Northern Territory	TBC
New Zealand	New Zealand	—

A State Maintenance Lead is usually also the Local Maintenance Lead of their own mandir. Duties for their own site follow the Local Maintenance Lead – Roles & Responsibilities; the duties below cover the whole state.

2) Support for Local Maintenance Leads

Local Maintenance Leads need a nearby, knowledgeable person to turn to before issues reach the national team.

a) Act as the first point of contact and support for every Local Maintenance Lead in the state.
b) Help onboard new Local Maintenance Leads and their backups, and explain the national framework, templates and checklists.
c) Help local teams deliver their 12-month maintenance calendar and keep their records current.
d) Coordinate help between nearby mandirs during emergencies or big events (for example sharing volunteers, tools or contractors).
e) Share good practice and practical fixes between mandirs in the state.

3) State Knowledge and Contractors

Rules, regulators and contractors differ between states, so local knowledge prevents delays and compliance gaps.

a) Know local council rules, state regulators, licensing registers and statutory testing requirements in the state.
b) Know good local contractors, and recommend them to the Contracts & Procurement Lead for the approved contractor list.
c) Report contractor performance issues in the state to the Contracts & Procurement Lead.

4) Approvals within Delegation

The State Maintenance Lead approves mid-sized work so local teams can act quickly, while larger work is controlled nationally.

a) **Financial approval:** approve jobs of **$1,001 – $5,000** that are above the mandir's local limit:
   i) Type A and B centres: local limit is $2,000, so the State Maintenance Lead approves jobs from $2,001 to $5,000.
   ii) Type C centres: local limit is $1,000, so the State Maintenance Lead approves jobs from $1,001 to $5,000.
   iii) Keep the Mandir Coordinator informed of each approval.
b) Approve internal permits-to-work (hot work, roof access and confined space) and medium-priority jobs within delegation.
c) Check the job is not major maintenance work before approving; refer anything above $5,000, or any major work, to the National Maintenance Team for the CAPEX workflow.
d) Record every approval in the maintenance system, with the reason and amount.

5) Major Maintenance Work

Local teams must raise major work with the State Maintenance Lead before seeking quotes, so the national team can plan, approve and control it.

a) Receive proposals for major work from Local Maintenance Leads, check the need and scope, and pass them to the National Maintenance Admin.
b) Help prepare the scope of work with the local team and the National Maintenance Team.
c) Make sure no major work starts before the Compliance & Permits Lead has confirmed all permits, licences, approvals and insurances.
d) Attend or support pre-start meetings, and visit the site while major work is underway.

6) Site Visits and Inspections

Seeing each site in person keeps condition information accurate and helps local teams.

a) Visit each mandir in the state when needed for the condition inspection of major assets and equipment.
b) Visit sites when major work is underway, and check contractors on site meet licence, insurance and SWMS requirements.
c) Share inspection findings with the Asset & Planned Maintenance Lead for the asset register and lifecycle plan.

7) Emergencies and Escalation

The State Maintenance Lead is the second step in every escalation.

a) Receive emergency notifications from Local Maintenance Leads: P1 at once, P2 within 24 hours.

b) Make sure P1 events are reported to the National Maintenance Admin at once.
c) Help local teams make sites safe and find an approved contractor quickly.
d) Resolve issues beyond local delegation where possible, and escalate to the National Maintenance Admin if not resolved, or for any P1 event, major work or compliance risk.

8) Compliance and Safety

Statutory compliance in the state is tracked nationally but followed up locally.

a) Follow up compliance items due or overdue in the state with Local Maintenance Leads and the Compliance & Permits Lead.
b) Make sure local teams follow national WHS procedures, including for volunteers working at heights, with ladders, power tools or chemicals.
c) Report safety concerns, incidents and near misses in the state to the National Maintenance Team.

9) Reporting and Meetings

Regular reporting gives the national team a clear view of each state.

a) Review the monthly local reports from the state before the national meeting, and follow up any that are late.
b) Give a regional update at the national meeting (by exception).
c) Attend the monthly national meeting and the national team meeting.
d) Call ad hoc meetings with one or more local teams when needed (for example after an emergency, before major work or before a major festival).
e) Take part in the annual planning workshop, bringing the state's maintenance and budget needs.

10) Team Development

Strong local teams across the state make the whole network stronger.

a) Encourage each mandir to build a local maintenance team and train a backup for its Local Maintenance Lead.
b) Identify training needs in the state and raise them with the National Maintenance Admin.
c) Strengthen samp between mandirs in the state, and do seva to earn Swami's Rajipo.
