BAPS ANZ – Application Level 1 & 2 Support Analyst (Volunteer/Seva Role)

1) Role Overview

The Application L1/L2 Support Analyst supports day-to-day user requests and incidents for applications owned and managed by the BAPS ANZ National Technology Team (BAPS ANZ Technology Stack).

This role helps ensure a smooth devotee and volunteer experience by providing timely support, clear updates, and consistent resolution practices.

Examples of systems may include: SharePoint, Jotform, PowerApps, MIS, MySatsang, Event Management, official regional websites, Shayon/Aksharpith management systems, Square system, MySeva app, and other National-owned applications.

This role supports users by handling incidents/requests, performing troubleshooting, maintaining basic application health checks, and documenting common solutions.

- Department: National Support Team
- Time commitment: ~10–15 hours per week (flexible)
- Reporting line: National Technology Support Lead (functional), with overall oversight by BAPS ANZ National IT Lead
- Works with: National Platform/Infrastructure Team, National Systems (Applications) Team, Local Center IT Admin/Regional Coordinators
- Scope: Support & Service Operations for National-owned infrastructure/platform services within the BAPS ANZ Technology Stack

2) Key Responsibilities

A) L1 – Frontline User Support & Triage

- Act as a first point of contact for application-related incidents and requests.
- Log and track requests/incidents received via email/phone/messages in the agreed Support Tracker (spreadsheet/Microsoft List).
- Perform initial troubleshooting using standard steps/knowledge articles.
- Support common issues such as access/login problems, basic usage, form submission issues, and simple configuration guidance.
- Provide clear updates to users and confirm resolution.

B) L2 – Deeper Technical/Functional Support

- Handle escalations from L1 requiring deeper investigation (configuration, workflow issues, data validation, integrations, etc.).
- Perform analysis using logs/error messages and (where applicable) SQL/data checks to identify root cause.
- Coordinate with application owners, platform/infrastructure, or vendors for defects or complex fixes.
- Support release/change activities (as needed): verifying fixes, supporting patching, validating key functions post-change.

C) Monitoring & Routine Checks

- Perform agreed routine checks (dashboards, alerts, scheduled jobs) and report anomalies to L2/owners/Support Lead.

D) Documentation & Knowledge Management

- Maintain and improve user guides, FAQs, and troubleshooting notes.
- Record new issues and solutions into the knowledge base so future support is faster.

E) Escalation Path

Escalation Path: L1 → L2 → National Technology Support Lead → National Systems (Applications) Team / National Platform/Infrastructure Team → National IT Lead (and vendor if required)

- Escalate when: high impact, recurring issue, security concern, unclear ownership, or unable to resolve with standard steps.

3) Required Qualifications

Volunteer/Seva-friendly: formal qualifications are helpful but not mandatory.

Comfortable supporting users and learning systems quickly.

4) Technical Skills Required

Basic understanding of application workflows and user support.

Troubleshooting using knowledge articles/standard procedures; ability to collect evidence (screenshots/errors/steps).

Access/identity basics (authentication, permissions concepts).

L2 beneficial: SQL/log analysis, integrations/API awareness, release/change understanding, basic automation/scripting exposure.

5) Technical Certification Required

No certification required (volunteer role).

Preferred/optional: ITIL Foundation; Microsoft/AWS fundamentals; SQL or scripting fundamentals.

6) Professional Skills

Strong communication and customer service mindset.

Ability to prioritise and handle multiple issues calmly.

Good documentation habits and teamwork.

7) Experience Requirements

Recommended: 1–3 years of application/IT support experience (work or volunteering) or equivalent capability.
