BAPS ANZ – National Technology Support Lead (Volunteer/Seva Role)

1) Role Overview

The National Technology Support Lead provides leadership and coordination for Support & Service Operations across the BAPS ANZ Technology Stack (applications and infrastructure owned and managed by the National Technology Team).

This role ensures user requests and incidents are captured, prioritised, tracked, resolved or escalated, and that national services are monitored, maintained, and supported with up-to-date knowledge documentation.

The role also guides and supports L1/L2 Support volunteers and works closely with Local Center IT Admin/Regional Coordinators and the National Platform/Infrastructure and National Systems/Application teams.

- Time commitment: ~10–15 hours per week (flexible)
- Reporting line: BAPS ANZ National IT Lead
- Key relationships: National Platform/Infrastructure Team, National Systems (Applications) Team, Local Center IT Admin/Regional Coordinators, L1/L2 Support Volunteers

2) Key Responsibilities

A. Support & Service Operations (Requests and Incidents)

- Be the primary coordinator for day-to-day user support across national systems.
- Ensure requests/incidents are recorded, prioritised, assigned, progressed, and closed with clear communication to users.
- Maintain service continuity by coordinating resolution efforts and ensuring users are kept informed.

B. Logging & Tracking (Email/Phone/Message Intake)

- Operate a simple Support Request Tracker (e.g., shared spreadsheet/Microsoft List) to ensure no request is missed.
- Track key details such as: requester, centre/region, system impacted, request/incident type, priority, owner, status, actions taken, resolution notes, closure date.
- Establish and maintain consistent support workflows for intake, triage, assignment, escalation, and closure.

C. Escalation & Cross-Team Coordination

- Act as an escalation point for issues that L1/L2 cannot resolve or are high impact.

Engage and coordinate with the relevant teams to restore services:

• National Platform/Infrastructure (Azure/AWS, hardware, core services, security, storage, data/integration, identity)

• National Systems/Applications (e.g., SharePoint, Jotform, PowerApps, MIS, MySatsang, Event systems, regional websites, Shayon/Aksharpith systems, Square system, MySeva app)

• Local Center IT Admin/Regional Coordinators

• National IT Lead (for critical escalations, vendor involvement, leadership oversight)

D. Monitoring & Maintenance

- Coordinate and oversee system monitoring and health checks for national services (as tools/processes allow).
- Ensure follow-up on alerts/issues and coordinate planned maintenance activities.
- Confirm post-maintenance validation and service availability.

E. Knowledge Management

- Own and maintain the Knowledge Base / Runbooks for national technology services.
- Ensure documentation is clear, current, and easy to follow, including: common issue troubleshooting, access/request processes, escalation pathways and contacts, known issues and workarounds.
- Review and refresh knowledge content regularly and after significant incidents/changes.

F. Lead and Support L1/L2 Volunteers

- Provide day-to-day coordination, guidance, and mentorship to L1/L2 Support volunteers (each typically 10–15 hours/week).
- Help maintain consistent standards for request logging, troubleshooting quality, escalation readiness, and user communication.
- Identify skill gaps and coordinate knowledge transfer/training opportunities.

G. Work/Project Consolidation & Reporting

- Gather, consolidate, and maintain visibility of programs/projects/tasks across: National Platform/Infrastructure, National Systems/Applications, Local Center IT Admin/Regional Coordinators.
- Provide regular updates/reporting to the AAC Tech Lead (as agreed) and support the National IT Lead with operational oversight inputs.

H. Service Expectations (As Agreed)

- Ensure support requests and incidents are handled in line with response and resolution expectations as agreed within the team and leadership.
- Promote clear prioritisation (e.g., higher impact issues addressed first) and consistent user updates throughout the support lifecycle.

3) Required Qualifications

(Volunteer/Seva-friendly — formal qualifications are helpful but not mandatory.)

Demonstrated hands-on experience in IT support/service operations through work, volunteering, or equivalent practical experience.

Ability to coordinate work across teams and communicate clearly with end users and leadership.

4) Technical Skills Required

Incident/request triage and troubleshooting (structured problem-solving, evidence collection, escalation readiness)

Familiarity with Microsoft 365 collaboration tools (e.g., SharePoint/Teams/OneDrive) and common business app support patterns

Basic awareness of cloud/infrastructure concepts (Azure/AWS fundamentals, identity/access, monitoring, security hygiene)

Ability to create and maintain support documentation (KB articles, runbooks, quick-start guides)

Ability to run and maintain simple tracking systems (spreadsheet/Microsoft List) and produce short operational summaries

5) Technical Certification Required

No certifications required (volunteer role).

Preferred/beneficial (optional): ITIL Foundation; Microsoft Fundamentals (M365/Azure) and/or AWS Cloud Practitioner; Security fundamentals awareness (formal certification optional).

6) Professional Skills

Strong service mindset and respectful communication

Clear, concise writing for user updates and documentation

Leadership and mentoring capability for L1/L2 volunteers

Good judgement, prioritisation, and calm coordination during incidents

Organised reporting and stakeholder management

Trustworthy handling of access-related and sensitive information

7) Experience Requirements

Recommended: 2+ years hands-on IT support/service coordination experience (work or volunteering) or equivalent capability.

Nice to have: experience coordinating support across multiple locations/centres; experience supporting a mix of applications and infrastructure services; experience maintaining a knowledge base and improving operational processes; basic project/work tracking and reporting experience.
