BAPS ANZ – Local Center IT Lead (IT Focus) (Volunteer/Seva Role)

- Department: Local Centre (IT) / National Support Model
- Time commitment: ~10–15 hours per week (flexible; may increase during major events/incidents)
- IT functional reporting line: Local Center IT Admin/Regional Coordinator
- Works with: Centre volunteers/users (IT support), local departments (IT-related), Local Center IT Admin/Regional Coordinator, Local IT support volunteers, National Technology Support Team (via escalation)
- Scope: Local IT Support & Service Operations (locally run applications and infrastructure) + coordination/escalation for National-owned systems within the BAPS ANZ Technology Stack (via Local Center IT Admin/Regional Coordinator)

1) Role Overview

The Local Center IT Lead (IT Focus) provides end-to-end day-to-day IT support for the local centre, covering local hardware, applications, network/Wi-Fi, firewall, switches/routers, printers, TVs/displays, and other locally managed IT services.

This role supports the Local Center IT Admin/Regional Coordinator by owning the execution of local support activities (local L1/L2) and coordinating any additional local IT volunteers. Where

an issue relates to the BAPS ANZ National Technology Stack (National-owned applications or platform/infrastructure services), this role supports escalation through the Local Center IT Admin/Regional Coordinator to the National Technology Support Team.

2) Key Responsibilities

A) Local IT Support & Maintenance (End-to-End Ownership)

- Provide first-line and second-line (local L1/L2) IT support for devotees, volunteers, and staff at the centre.
- Support local hardware and devices: desktops/laptops, peripherals, meeting-room/event devices, printers/scanners, TVs/displays and presentation devices (IT-related aspects).
- Support local network services where locally managed: Wi-Fi, firewall, switches/routers, and basic connectivity troubleshooting.
- Support locally used applications/tools that are not owned by the National Technology Team.
- Own issues end-to-end from intake → troubleshooting → resolution → closure, with clear updates to users and stakeholders.

B) Logging & Tracking (No Ticketing System)

- Log and track local requests/incidents received via email/phone/Teams/messages using the agreed Local Support Tracker (e.g., Microsoft List or shared spreadsheet).
- Capture minimum details: requester, centre/area, system/device impacted, impact, priority, owner, status, actions taken, resolution notes, closure date.
- Keep the tracker current so requests are not missed and progress is visible, including handovers to other local IT volunteers when needed.

C) Local Infrastructure Reliability (Maintenance, Patching, Backup/Recovery)

- Perform routine checks for key local services (Wi-Fi health checks, device readiness for events/meetings, printer/display readiness).
- Coordinate and perform security patch management for locally managed devices (OS updates, application updates, and firmware updates where applicable and permitted).
- Support locally managed backup and recovery activities (as agreed), including maintaining a simple backup register and performing periodic restore checks when required.
- Raise risks or recurring reliability issues to the Local Center IT Admin/Regional Coordinator for visibility and improvement planning.

D) Local IT Procurement & Vendor Coordination

- Coordinate local IT procurement needs (hardware, networking equipment, peripherals, subscriptions) in discussion with the Local Center IT Admin/Regional Coordinator.
- For purchases, obtain at least two vendor quotes where practical and compare cost, warranty/support, compatibility, delivery timelines, and vendor reliability.

- Maintain document procurement decisions and retain quote references, invoices, serial numbers/warranty information for asset tracking and future support.

E) Team Coordination & Regular Catch-ups

- Coordinate and guide local IT support volunteers (if available) by allocating tasks, ensuring clear ownership, and supporting knowledge sharing.
- Participate in regular IT catch-ups with the Local Center IT Admin/Regional Coordinator (frequency as agreed) to review open issues, upcoming events, risks, and priorities.
- Organise short check-ins with local IT volunteers to ensure alignment, coverage and smooth handovers.
- Attend regional/national IT coordination meetings or training sessions when requested (via the Local Center IT Admin/Regional Coordinator).

F) Escalation & Collaboration (Local → National)

Escalation Path (Local IT): End Users/Local Teams → Local Center IT Lead → Local Center IT Admin/Regional Coordinator → National Technology Support Lead → National Systems (Applications) Team / National Platform/Infrastructure Team → National IT Lead (and vendor if required).

- Escalate when: issue relates to the BAPS ANZ National Technology Stack, impacts multiple users/centre-wide operations, is event-critical, is a security concern, is recurring, or cannot be resolved locally.
- When escalating, provide a clear handover: impacted users/centre, system/service, error details/screenshots, what troubleshooting was completed, and urgency (as agreed).

G) Documentation & Knowledge Contribution

- Create and maintain simple local IT documentation (common fixes, device/room setup notes, local network/Wi-Fi references where applicable).
- Assist with centre-specific IT services (e.g., local shared accounts for devices/services, local online services used at the centre) as delegated by the Local Center IT Admin/Regional Coordinator.
- Share useful learnings and recurring local issues with the Local Center IT Admin/Regional Coordinator for inclusion in broader documentation/knowledge base.

3) Required Qualifications

- Volunteer/Seva-friendly: formal qualifications are helpful but not mandatory.
- Comfortable supporting users and troubleshooting common local IT issues.
- Able to coordinate with local stakeholders and follow the national escalation/support model through the Local Center IT Admin/Regional Coordinator.
- Diploma or Bachelor’s in IT (optional) or equivalent hands-on experience.

4) Technical Skills Required

- End-user support fundamentals (device setup, troubleshooting, common productivity tools).
- Hardware/peripheral support (printers, displays, meeting-room/event devices).
- Local networking fundamentals (Wi-Fi troubleshooting, basic firewall/router/switch awareness where applicable).
- Security hygiene for local devices (patching/updates as agreed) and basic backup/recovery awareness (as agreed).
- Ability to maintain support logs and basic asset/procurement records (Microsoft List/spreadsheet).

5) Technical Certification Required

- No certifications required (volunteer role).
- Preferred/optional (beneficial): basic networking fundamentals, Microsoft 365 fundamentals awareness, basic security fundamentals awareness.

6) Professional Skills

- Service mindset with respectful, clear communication.
- Strong ownership and follow-through (ensure requests are not missed).
- Good judgement and prioritisation (higher impact issues first).
- Documentation discipline and willingness to share knowledge.
- Ability to collaborate with local teams, Local Center IT Admin/Regional Coordinator, and the National Technology Support Team (via escalation).

7) Experience Requirements

- Recommended: practical experience in IT support (work or volunteering) or equivalent hands-on capability.
- Nice to have: experience supporting IT in event/meeting environments, basic vendor coordination/procurement (including quote comparisons), and coordinating small support teams.
